PROFESSIONAL EXPERIENCE

CubeSimple, Chennai, India

Sep 2024 – Aug 2025

Business Analyst | Domain: Talent Acquisition, Operations Analytics, ServiceNow, Process Management

- Led the automation of candidate sourcing and requirement tracking in ServiceNow, streamlining operational workflows and reducing manual updates by 90%, significantly improving process efficiency.
- Gathered, analyzed, and documented business requirements from stakeholders and translated them into actionable requirements, user stories, and supporting documentation for technical teams, improving requirement clarity and execution.
- Analyzed 40,000+ support tickets using Excel to identify trends, classify recurring issues, and optimize operational workflows, contributing to a 30% increase in team productivity and 15% faster issue resolution.
- Developed and delivered 15+ strategic presentations, client proposals, operational reports, and business analyses for cross-functional stakeholders, enabling clear communication and supporting data-driven decision-making.
- Designed and maintained user hierarchy structures in ServiceNow, collaborating with technical teams to align role-based access, organizational structures, and business requirements, improving operational clarity and access management.
- Compiled and maintained weekly and monthly operational reports, consolidating key performance information and providing management with improved visibility into team performance, operational trends, and business activities.
- Supported talent acquisition and workforce enablement activities, including candidate screening, mock interviews, training coordination, and progress tracking, ensuring structured onboarding and continuous skill development.
- Collaborated with developers and technical teams to gather data, document user stories, analyze requirements, and communicate business insights, ensuring alignment between business needs and technical implementation.
- Assisted in preparing Statements of Work (SOWs) and conducting event management analysis, coordinating requirements and supporting smooth project delivery and stakeholder alignment.

Projects

Fraud Detection in Online Consumer Reviews Using Stack Ensemble

- Developed an AI-powered fraud detection system to classify online consumer reviews as fake or genuine across Home & Office, Sports, and Health categories.
- Performed text preprocessing and feature engineering using Python and implemented supervised machine learning algorithms including Logistic Regression and Support Vector Classifier (SVC), achieving accuracy of 88% and 86%, respectively.
- Implemented a Stack Ensemble approach combining predictions from multiple machine learning models, achieving approximately 89% classification accuracy and improving overall model performance.

Repository Reader Using API

- Developed an AI-powered GitHub Repository Reader using Python, LangChain, and OpenAI API to analyze repository code and provide contextual insights for developers.
- Implemented NLP-based code comprehension capabilities to help developers understand code structure, identify potential issues, and generate relevant recommendations.
- Designed the solution to streamline code analysis and review workflows, demonstrating practical application of Generative AI, API integration, NLP, and software development concepts.

Power BI E-Commerce & Marketing Analytics Dashboards

- Designed and developed interactive Power BI dashboards using structured business datasets to analyze sales, customer behavior, marketing performance, conversions, and operational KPIs.
- Performed data cleaning and transformation using Power Query, created calculated measures using DAX, and developed interactive visualizations including KPI cards, bar charts, line charts, scatter plots, donut charts, and slicers.
- Built dashboards to answer business questions such as top-performing products/platforms, conversion trends, customer performance, marketing spend, CTR, CPC, CPM, and CPL, enabling data-driven business analysis.
- Applied data modeling, KPI analysis, filtering, drill-downs, and interactive reporting to transform raw datasets into actionable business insights.

SKILLS & INTERESTS

Technical Skills: SQL, Power BI, Excel, Python, Tableau, ServiceNow, Data Analysis, Requirements Gathering, Documentations.

IDE: Jupyter Notebook, VS Code, Microsoft Office, free-SQL

Soft Skills: Strong presentation skills, Solid Business Analyst skills, Problem Solving, Time Management, Strong leadership, Stakeholder Management, Project Management, Team Coordination, Documentation

EDUCATION

Saveetha Engineering College, Chennai, Tamil Nadu, BTech Artificial Intelligence & Data Science

Aug 2020 – Jun 2024
